How to make 750ml (Dlog Technologies) Liquid Organic Manure (LOM) from 7.5 ml LOM-C Strong

Trail Processing: Take 740~760ml water (Well or tap water) in a well dried 1 litre PET bottle. Without adding 7.5ml LOM-C, close this bottle tightly and shake this bottle up and down (as shown in the Video) 20 times speedily, uniformly, continuously, without stopping. Now repeat this 2 or 3 times and train yourselves to shake the bottle perfectly 20 times. To avoid interruption switch of mobile phones temporarily. Now you are ready to make 750ml LOM anytime, without any further trails.

Actual Processing: Remove the 740~760ml water from the bottle used for trail processing and take 740~760ml water again afresh. (Or take 750ml water in a well dried 1 litre PET bottle). Now take on hand 7.5ml LOM-C Pouch, shake it once, and made a very small cut opening in a corner with the help of a small scissors, and pour the 7.5ml into the PET bottle. Now immediately close the cap of bottle tightly and, within 60 seconds start the 20 counts processing and complete it perfectly. Now 750ml Liquid Organic Manure (LOM) is ready. It takes only one minute time, to convert 7.5ml LOM-C to 750ml Liquid Organic manure (LOM). You can keep in store and use this 750ml LOM even for 5 years. But shake the bottle once before taking out LOM for use.

Reuse of PET bottle: Wash this 1 litre PET bottle with soap water a few times and clean with water 4 or 5 times and dry it well in bright sunlight for 3 to 4 days, before reusing this PET bottle.

Note: Please do LOM-C to LOM processing only after watching manufacturer's Video link at <https://youtu.be/UpOnicNmuMA>
